A Student Guide to Field Study

The Field Study Program was developed as a School of Social Ecology undergraduate degree requirement to immerse students in rigorous, innovative, and engaged learning both in the classroom and through active participation in our community.

ABOUT FIELD STUDY

In this classroom, students engage with faculty and one another through lectures, discussions, writing, and presentations, synthesizing their feedback with theory, paradigms, and ideas learned during their coursework.

With faculty guidance, students explore and develop professional competencies that complement their fieldwork experiences and prepare students for future graduate school and career goals.

During field placement, experiences provide guidance and mentorship to foster student professionalization and community engagement, while students thoughtfully contribute to the organization’s programming and help support the communities they serve.

Students have the opportunity to explore a career field, observe, and participate in organizational operations, and develop their interpersonal and technical competencies in a supportive, professional learning environment.

Students will examine and identify local stories on the Mexican community in Los Angeles and Orange County.
